

## General notes

- i) All details are correct at time of going to press. London Capital Group Ltd reserves the right to alter the contract specifications at anytime and to widen spreads in times of excessive market volatility.
- ii) **All times stated are UK times.**
- iii) All trades are closed on a 'First in First Out' basis.
- iv) The minimum trade size on all products is £1, \$1, 1€ or 1 SEK.

## Maximum Computer Generated Stop Level (Max CGSL)

The Max CGSL is the Maximum Computer Generated Stop Level. This is the maximum figure used to automatically allocate a stop loss on newly opened positions. The trading system will assign a stop level based on 80% of the CGSL if there are sufficient funds on the account. For instance, if you have £2000 in your account and you trade the Daily FTSE at £10 per point, the system will automatically allocate a stop loss of 100 points (because the Max CGSL for the Daily FTSE is 125 and 80% of 125 is 100) and you would also have £750 remaining as available funds on your account. Alternatively, if there are insufficient funds to cover the Max CGSL, the system will allocate the stop level based upon 80% of the available funds (see following details). The Max CGSL varies depending on the product.

## Minimum Initial Margin Requirement (Min IMR)

The Min IMR is the Minimum Initial Margin Requirement. You can calculate the minimum level of funds required to open a new position by multiplying the Min IMR by your stake. For example, the current Min IMR for the FTSE 100 Index Future is 30. Therefore, if you wished to trade £5 per point, you would need a minimum of £150 available funds on your account ( $30 \times 5 = 150$ ). The Min IMR varies depending on the product.

## Capital Spreads' Stop Loss Policy

Capital Spreads automatically creates a stop loss for every trade opened. This stop loss is based EITHER on 80% of the CGSL OR on 80% of the available funds on your account. You may amend your stop loss to whatever level you desire, assuming you have the funds available and that your required stop is outside the minimum stop distance allowable for that market. Although this stop loss does go some way towards limiting your risk on your open trades **you must be aware that all orders (including stop-losses are not guaranteed.** This means that should a market gap, you may lose more money than your initial deposit (see clause 7 in the Terms and Conditions).

LCG will not quote any markets outside of its opening hours which are generally Sunday 23:00 to Friday 21:15, UK time.

## Notes on Individual Shares

- i) In respect of dividends, an adjustment to your account shall be made with reference to any dividend or distribution attributable to any relevant security on which a trade is based and shall be made and calculated as follows:
- where your Position would result in a credit to your account (for example a Buy position in an equity which goes ex-dividend) we shall adjust the account balance in your favour by 80% of the gross dividend multiplied by the Transaction Size; or
  - where your Position would result in a debit to your account (for example a Sell position in an equity which goes ex-dividend) we shall adjust the account balance in our favour by the gross dividend multiplied by the Transaction Size.
- ii) On expiry of equity trades of less than £30,000 total notional value the settlement price will be based on the closing bid or offer price of the trade plus or minus the LCG spread on that trade depending on the customer's position (if the customer has a Long Position on expiry the settlement price will be the bid of the share in the market at expiry time minus the spread and if he has a Short Position on expiry the settlement price will be the offer of the share in the market at expiry plus the spread).
- iii) On expiry of an equity trade of greater than £30,000 total notional value LCG shall settle the trade at either the average price of the underlying share in the last hour of trading of the last dealing day on a fair and reasonable, in the assessment of LCG, bid/offer spread plus or minus the relevant LCG spread or at the price achieved by LCG in removing its hedge on the relevant trade during the course of the final business day of the relevant expiry date plus or minus the relevant LCG spread or at the closing bid/offer spread price in the relevant underlying market plus or minus the relevant LCG spread.

## Rollover of Futures Contracts

Rollover terms on all markets are available with Capital Spreads. To avail yourself of any rollover concessions you must indicate to Capital Spreads 45 minutes before the expiry of the relevant contract that you wish to roll. Capital Spreads will rollover futures contracts as follows:

- For equities, Capital Spreads will expire the existing trade spread free (at just the underlying market price) and offer the subsequent quarter at half of the spread.
- For all other contracts, Capital Spreads will expire the trade at our mid point and offer the subsequent quarter at the current Capital Spreads quote.

### Notes

- Capital Spreads closes the existing trade on rollover of futures contracts and subsequently opens a new trade on the next month/quarter
- Any profits or losses incurred are realised on rollover of futures contracts.

## Rolling Daily Contracts

Rolling Daily contracts may incur a debit or credit for each day that they are held overnight. If you are long of a market, this equates to real market cash exposure and so interest may be charged on this cash value for each day that the position is held open overnight. If you are short of a market, an interest return may be paid on these equivalent cash funds.

The overnight financing can be calculated as follows:

$$F = \frac{(p / u) \times s \times i}{b}$$

b

F = overnight financing

p = closing price

u = unit risk

s = size

i = applicable interest rate (RFR +2% for long positions or -2% for short positions)

b = day basis (365)

### Notes on Daily Rolling equity and index trades

- The Relevant Funding Rate (RFR) is generally equivalent to the base rate of the underlying currency of the country of the market concerned. Long rolling trades on shares / indices may be debited financing (RFR plus 2%). Short rolling trades on shares / indices may be credited financing (RFR minus 2%). For example, the RFR for a short rolling daily trade on Google would be based upon the base rate (Fed Funds Rate) of the USA minus 2% (e.g. 3.25% - 2% = 1.25%).
- The unit risk is the smallest movement on the relevant contract.
- Dividend adjustments are credited to long positions and debited from short positions held at the close of business on the day before the ex dividend date. If you are long, you may receive 80% of the dividend and if you are short you may be debited 100% of the dividend. Payment is credited / debited to your account on the ex-dividend date. Dividend adjustments may also apply to index positions.

### Notes on Daily Rolling currency trades

- The Relevant Funding Rate (RFR) for Forex trades is generally equivalent to the base rate of the second currency minus the base rate of the first currency in a currency pair. For example, the first currency in the currency pair GBP/USD is sterling and the second is the US dollar. Therefore, the corresponding RFR for GBP/USD may be calculated as follows: 3.25% (USD) minus 4.50% (GBP) = a negative interest rate of minus 1.25% or -0.0125%.
- For Daily Rolling currency trades, the difference between the interest rates of currencies may be a negative number.

The rates used for the examples above are indicative and are not necessarily representative of correct rates.
